

## DO YOU HAVE OSTEOARTHRITIS OF THE **KNEE**?

We are looking for adults aged 35 to 85 who have been diagnosed with knee osteoarthritis for at least three months and are currently using oral NSAID medications to help manage their symptoms.

### What is involved?

Participants will be randomly assigned to receive either the study treatment—an NSAID topical foam—or a placebo, to apply on one or both knees over a 4-week period. Study visits will take place at Genesis Research Services in Broadmeadow, Newcastle. During these visits, you would complete questionnaires regarding your pain and functional level, as well as maintain a diary at home.

### Are there any costs associated ?

There will be no additional costs to you for participating in the study. To compensate you for your travel and time, you will receive a reimbursement of \$50 per study visit.

***If you would like to apply to the study, please use this QR code, or, if you would like further information, please contact us on 4985 1860.***
